By Authority of Congress.

U. S. Gov't Baking Powder Tests.

The report of the analyses of Baking Powders, made by the U. S. Government (Chemical Division, Ag'l Dep't), shows the Royal superior to all other powders, and gives its leavening strength and the strength of each of the other cream of tartar powders tested as follows:

	LEAVENING GAS.		
ROYAL, Absolutely Pure,	Per cent. 13.06 .	Cubic in. percs.	
	/ 12.58 .	. 151.1	
The OTHER POWDERS	11.13 .	. 133.6	
TESTED are reported to con-	10.26 .	. 123.2	
tain both lime and sulphuric	9-53	. 114.	
acid, and to be of the follow-	9.29 .	. 111.6	
ing strengths respectively,	8.03 .	. 96.5	
	7.28 .	. 87.4	

These tests, made in the Gov't Laboratory, by impartial and unprejudiced official chemists, furnish the highest evidence that the "Royal" is the best baking powder.

China a Menace to the Civilization of All Lands.

Japan Within Her Rights in Her Efforts to Maintain a Hold Upon Corea
- Exclusive Nationality of the Chinese.

Sir Edwin Arnold is a warm partisan of the Japs, but he had the privilege of witnessing the grand army maneuvers of some two or three years since, and no one will deny to him a knowledge of the interior economy of the country. Sir Edwin Arnold, says the London Daily Graphic, will not countenance the belief of Mr. Curzon that the Japanese government is desperately occupied with domestic politics.

"I am surprised that so intelligent an bserver should not have known how little the Japanese houses of paritament count socially or politically against the policy of those ministers whom the emperor appoints and whom he removes at his sole pleasure. When the deputies make themselves impossible they are simply sent home; when they refuse supplies public funds are taken quietly on account; and when hey bring things to a deadlock the imperor and his advisers carry on the asiness of the country, after dissolvng parliament, which, amid all these agaries-the lively working of new nd generous wine-remains steadfast-

loyal and ardently patriotic." That the two countries had equal ights in Corea, and that when one inreased its force the other was bound do the same, was the writer's conention-in short, that Japan has done and is doing precisely what England would have done under the same circomstances. "In the present struggle Japan unquestionably stands the champion of progress, of justice, and of in-ternational development, so that the partisanship shown in certain quarters against her has in it an element of stupidity which cannot, therefore be easily excused." Mors interesting than this, though, is Sir Edwin Arnold's reminder of one of the forces "which more potently tends to hold China together in her intense and exclusive nationality." namely, the extreme anxiety of the Celestial to be buried at home. "But if some high ecclesiastical authority, or the Vermillion Pencil itself, should decree as they well might, that Confucius should be satisfied if a pinch of Chinese dust were thrown into the foreign grave-then the floodgates would be open to a general Chinese immigration into all lands.

"One perceives how heavy the obligation is, and at the same time how binding, when again and again, at San Francisco and other ports of embarkation, Chinese passengers are stopped carrying in a carpet-bag or a hat-box the bones of their relatives. But when any such general emigration of Chinamen occurs as that which I am forecasting, it will be a social and industrial deluge. The markets of the world will be literally swamped with the most industrious, persevering, fearless and frugal specimens of mankind who will everywhere underbid labor and nonopolize trade, as they have done in Singapore, Penang and many other spots. The danger to civilization that hina represents consists in this rather than in her unwieldy strength and slothful resources, the inefficacy of which for actual service Japan has already exposed by the brilliant com-

mencement of the present campaign. "For these and other reasons it is to the interest of the civilized world that For full information call at city ticket office, itt 4 China should not become more homogeneous or any larger than she is at present, and above all that she should not intrigue with the standing menace to human progress, the Russian empire, against the free-dom of the Pacific. That German journal had the true instinct in scientific politics which lately wrote that, in the war just declared, the sympathies and good wishes of civilization were due en-

tirely to the side of Japan." Treasured Presents from the Queen. Jewelers to Queen Victoria have soft snap since her craze for theatrical performances at Windsor. It is opined that diamond brooches and bracelets must be bought by the gross, as her prajesty always pays the artists in these tokens of her consideration and appreciation of the show. Many are the favored stars who now own queen's brooch, and who look on the gift as a lucky piece ever after. It speaks well for their loyalty and the beauty of the jewel that the reciplent always says it shall never leave the family, but become an heirloom Hervest excusions at one fare plus \$2.00 or the round trip. Tickets soid Oct. 25 and Nov. 6 to all points in Texas. Return but they vary in design, and the artist imit twenty days, good to stop off in both firections. Texas state fair at Dallas, 1-x., Oct. 20 to Nov. 14 Round trip, 12.6. Trakets soid Oct. 19 and 26 and Nov. 2. Final limit Nov. 10. 127-25 J. H PHILLIPS, Ticket Agent. who receives a crown in diamonds and rubies with the initials "V. R. I." from the royal hand deems the honor worth living for. Mme. Sigrid Arnoldson received one of these brooches when she sang in "Philemonet Baucis" recently, and Mrs. Kendal has one like it which she told some friends was placed in her dress by the queen herself, when the Kendals were commanded to play at Windsor seven or eight years ago.

> "A blessing in the household" is what othern newspaper calls D Price's Baking Powder.

ELECTRICITY ON THE FARM. Country Life May Be Made Less Laborious

by a New Agency. Part of the growing difficulties occasioned by the desertion of the country and the crowding of the cities will be remedied, perhaps, by six years hence-in that wonderful year 1900, which electricians set as a mile post of human progress-by the crowning of steam's rival, says the New York Press. Machinery is rapidly taking the deadening drudgery out of farm work when conducted scientifically and on a large scale, and is causing it to attract the attention of city people who long for the healthful fields. Only the bodily discomforts of farm work have prewented an exodus from the city to the country. Already electricity is turning its attention to the long neglected farm work, and has discovered profitable results to be had by subjecting crops to currents of electricity. beginning to simplify the ponderous farm machinery, and as soon as the storage buttery has received its finishing touches and can be applied to lightening the farmer's toll and increasing his profits the farmer will be looked upon with envy by the prisoners of city streets and counting house walls. Those particular effects of electricity upon farm machinery and farm life hospi are however, visible shiefts in the im-

WHAT MIGHT OCCUR agination at present, and are not at all PIECES BROKEN OFF one great change may be looked for in this direction in the immediate future. and that is the improvement of the farmer's condition by means of good roads and the rapid transit which electricity is almost ready to bring. thus greatly enlarging his market and bringing him higher prices for fresher products, and also bringing him closer to the life and pleasures and stimulating effect of the city. There is to be a wonderful change in farm life in the more thickly settled parts of the country in a very few years, and rapid transit will be largely responsible for it. The cheap transmission of electrical power must bring soon many, changes that will be felt in the city household, and perhaps the chief of them will be the abolition of the cook stove as it is known at present. The small electric heater has already begun to take its place, and it is almost certain that even in six years coal will be banished from a majority of the kitchens in cities adjacent to water power from which electricity is generated. When heat is wanted for cooking purposes it will be had at a moment's notice by the pressing of a button.

THE SOLAR SYSTEM.

Vastness of Some of the Greater Stars of the Pleiades.

If our sun were removed to the Pleiades it would hardly be visible in an opera glass with which nearly 100 stars can be seen in the cluster. Sixty or seventy Pleiades surpass our sun in brilliancy, Aleyon being 1,000 times more brilliant, Electra 500 times and Maia nearly 400, says Longman's Magazine. Sirius itself takes a subordinate rank when compared with the five most brilliant members of a group the real magnificance of which we can thus in some degree apprehend. If we seek to know the dimensions, not of the individual stars, but of the cluster itself, we are met with many difficulties, but, on the assumption that it is approximately spherical in shape, we can calculate its diameter to be over 40,000,000,000 miles. If we think of the dimensions of our solar system by themselves or in relation to terrestrial matter they appear stupendously enormous. Neptune, the most distant known member, has an orbit over 5,-000,000,000 miles across, but the solar system is to the Pleiades but a Liliputian to a Brobdingnagian-is but a microbe to a mountain-for a sphere the size of the solar system would, if it were spherical and its diameter that of the orbit of Neptune, be relatively so minute that it could be contained more than 400,000,000,000 times in a sphere the size of the Pleiades; in could contain 150 solar systems as many times over as there are miles between Neptune and the sun. It must not be forgotten that though there are sented the doubting Thomas 2,300 stars in the cluster, yet with such dimensions for the entire group vast distances must separate the stars from one another. In fact, 2,300 spheres, miles, could be contained in the limits a sphere 3,000,000,000 miles across, and from its nearest neighbor.

MONOCLES IN EUROPE..

Believed to Have Originated in the British

In every capital of Europe the monocle is common enough, says the New and some specimens become phos-York World. It attracts no attention on the street. In a row of men at a theater a considerable proportion are sure to have it. Perhaps half the officers in the German army wear m any meeting of the French academy. Even socialist deputies in France are not ashamed to go among their constituents wearing them. A session of the English house of commons glitters with solitary eyeglasses. The single eyeglass is said to have originated among the officers of the British army. About the beginning of the century an order was issued that army officers should not wear eyeglasses or spectacles. It was supposed that they gave the wearers an unmilitary appearance. The order caused severe inconvenience to many short-sighted officers, and one TO YOUNG AND MIDDLE AGED MEN of them belonging to a crack regiment invented the single eyeglass; its use was no contravention of the order which prohibited spectacles and eyeglasses. It soon became very popular in the army and was afterward adopted. On account probably of this origin the single eyeglass is very generally worn in Europe by army officers. It is by some thought to give an aspect of determination and ferocity to the wearer whereas eyeglasses lend an air of feebleness.

Interesting Facts About Some of the World's Rare Gems.

Beautiful Agates and Crystale Known to the Ancients-The Diamond Not the Most Valued, as Is Commonly Supposed.

Beyond all question, the ruby stands supreme as the most precious substance in the world, says the New York Advertiser. So much many persons know, but few are aware that rubies, sapphires, oriental amethysts and to- tremely fluctuating, one reason being pazes are all practically the same gem. They are corundum, or crystallized alumina, but with infinite diversities of coloring and infinite different values. It is curious, but true, that a ruby is for the true ruby, is the red zircon, also only a red sapphire, and a sapphire called jargoon and jacinth or hyacinth.

come from Burmah, those from Siam or Ceylon being too dark or too pale, and the Montana stones being cloudy and brown. A perfect one carat specimen may cost six hundred dollars, while a diamond of the finest water of the same size can be bought for one hundred and twenty-five dollars. The rich eolor of the ruby, a color which does not blacken like the blue of a sapphire all are not even agreed as to the sapphire's velvet tinge. This latter stone is much less valuable than ruby, being found larger and more abundantly. Sapphires really present all colors, the pure white variety, when skillfully cut, being difficult to tell from a diamond. This is a deception dishonest jewelers not unfrequently practice to catch the unwary. Both rubies and sapphires are occasionally met with as "star stones"-that is, opaque cabochon-cut gems showing the perfect steely rays

The emerald is another exceedingly dear stone, surpassing the diamond in value when of good size and free from flaws. Unfortunately, this gem is rarely faultless, but, if perfect, it easily fetches five hundred dollars a carat. Emerald and aquamarine, the latter a beautifully sunny sea-green stone, are identical in chemical composition, being varieties of the mineral beryl with traces of different coloring matter. Beryl is found in all shades from honey yellow to the velvet green of the right emerald. The aquamarine variety has fately become dear and fashionable, and rightly so, for the stone is durable and a lovely object. The late emperor of Brazil is said to have possessed an other words, the limits of the Pleiades equamarine of over two hundred ounces troy weight. The indefinite colors of the beryl must have been known for ages, since this gem repre-

After perfect rubies and emeralds, and perhaps after great pearls, comes the diamond in value. This, too, has a range of colors, the most prized being each with a diameter of 3,000,000,000 red, blue, green, and water white, while brown or gray tinges are not quite assigned to the group, and assuming so highly esteemed. The Koh-i-Noor, of equal distribution of the stars in the one hundred and two and three-fourths group, each would be at the center of carats, ranks low in point of size with some of the world's great stones-for therefore a light journey of 187 days instance with the Great Mogul, two hundred and seventy-nine carats in weight. Diamond is the hardest mineral known, brittle though it be; acids do not affect it, and it is also the only combustible gem. It has high refractive and dispersive powers ("fire"),

DO YOU KNOW

Defounities—Control, Bair lip, etc., cured, Nervous diseases, organic weakness and paralysis cured by the use of electricity.

Subdills—A sure cure for this terrible disease.

ASURECURE

phorescent by the action of light. Rusually occurs as an eight-sided crystal.

The name topaz is applied to three distinct kind of stones, to the oriental topaz, which is really a yellow supphire; to the Scotch topaz, which is only quartz, just as amethysts are violet-colored quartz of little value; and to the Brazilian topaz, a vivacious, sherry-colored gem which is the only true topaz. This latter stone takes a high, brilliant polish, and it feels slippery to the touch. The rose pink topaz seen in shops is not a natural color; it is obtained by subjecting the dark yellow varieties to great heat. The commercial value of topaz is exthat light exercises a bleaching effect

Another gem, beautiful and interesting in itself, which is occasionally sold only a blue ruby

The finest "pigeon's blood" rubies rubies" and charge accordingly Jewelers call these stones "jacinth gem is of all colors, the pure white ones being hard to distinguish from dia monds, on account of their wonderful fire. Chrysolite is just as white, but it is like glass compared with a diamond or jargoon.

There are two kinds of chrysoberyl used as gems. One the well-known criental cats-eye, an opaque greenishbrown cabochon-cut stone, showing a by night, is supposed to be due to a steely flash or line like silver wire; the trace of oxide of chromium, but this is other, the little known but beautiful still a moot point with chemists, and and curious alexandrite. This unique gem is olive or pistachio green by daylight, and it has the remarkable property of turning a raspberry red by artificial light. The green tourmaline is much like alexandrite by day. This is the most chemically complex of all gems, and it occurs also in red and brown crystals.

Spontaneous Combustion.

As it is known that spontaneous cornbustion sometimes takes place in cargoes of coal, it has been suggested that under certain conditions coal-fields may ignite and in time produce volcanoes. Occasional and violent eruptions may be caused by the burning away of barriers and the inflow of water suddenly producing an enormous bulk of steam, which must find an outlet. The idea that clean cotton may take fire spontaneously is scouted by many experts. They claim that what is called by this name is the result of some spark that may smolder unobserved for weeks and then may break out in some unsuspected fashion. Tobacco, linen, jute and oily cotton, however, inflame spontaneously on what would seem, to a scientific mind, insufficient provocation.

rour of the most eminent men in Europe are at the present time suffering from partial blindness. In all cases the nature of the ailment is the same, namely, cataract, and all the illustrious patients are hopefully seeking relief in the resources of medical science. Mr. Gladstone has had several operations performed upon one of his eyes, the result of which, it is believed, will be almost fully to restore his vision, while the other eye is still sound enough to enable him to read and write. Sir William Harcourt's eves are both much obscured, and must soon have relief or be altogether darkened. He will presently place himself in a surgeon's hands. M. Jules Simon is in a like plight, but hopes to have the opaque veil entirely removed. And
